## Veneers

Veneer Laminates can be utilised to create a harmonious balanced smile line. This type of treatment is an excellent alternative to orthodontic treatment in many adult patients. Correcting rotations, alignments, closing gaps and improving colour discrepancies. This is a straight forward procedure and creates fabulous solution to long standing aesthetic problems.

### Treatment Explanation

Veneer laminates are bonded on to teeth to close diastemas (gaps) and re-align teeth correcting aesthetic deficiencies and harmonising the smile line. Where diastemas are very wide the additional strength of crowns is required.

### Treatment Time

Treatment time involves two appointments over a two week period. A review appointment is scheduled 1 week later.
